Project Title

Used Car Price Prediction

Abstract

This mini project aims to predict the prices of used cars in major metropolitan areas. Utilizing a comprehensive dataset, the prediction leverages various car attributes, including manufacturer, model, variant, fuel type, colour, kilometres driven, body style, transmission type, manufacture date, model year, CNG kit availability, ownership history, dealer details, and a quality score. Through data analysis techniques, the project seeks to generate valuable insights and accurate price predictions, ultimately assisting both buyers and sellers.
